Education

GEORGIA INSTITUTE OF TECHNOLOGY

Atlanta, GA

M.S. Computer Science, specialization in Machine Learning

Expected May 2026

B.S. Computer Science, concentrations in Intelligence (AI/ML) and Theory (GPA: 3.96/4.0)

Expected May 2025

Relevant Coursework: Data Structures & Algorithms, Machine Learning, Deep Learning, Graduate Algorithms, Computer

Organization & Programming, Automata & Complexity Theory

Experience

PLAYERZERO

Atlanta, GA

Incoming Software Engineering Intern

August – December 2024

GOOGLE

Kirkland, WA

Incoming Software Engineering Intern

May – August 2024

GEORGIA TECH EFFICIENT AND INTELLIGENT COMPUTING LAB

Atlanta, GA

Undergraduate Research Assistant

January – May 2024

- Contributed to a PyTorch toolkit to train distributed Graph Neural Networks (GNNs) for applications with multiple disjoint large graph datasets, such as electronic design automation analysis.
- Built a user-friendly modular data loading and transfer API and implemented the GraphSAGE GNN forward propagation and graph vertex embedding algorithm, improving model accuracies by an average of 15%.

GEORGIA TECH COLLEGE OF COMPUTING

Atlanta, GA

Undergraduate Teaching Assistant (Homework Lead)

August 2022 – May 2024

- Managed a team of 40 TAs in the development and grading of 12 homework assignments per semester for over 800 students as TA Homework Lead for CS 1331: Intro to Object-Oriented Programming under Prof. Richard Landry and Dr. Aibek Musaev.
- Led weekly recitations for 50 students and help students with problem-solving and debugging during one-on-one office hours.

GOOGLE

Sunnyvale, CA

Software Engineering (STEP) Intern

May – August 2023

- Implemented and tested an efficient parallel-processing data pipeline being used in production to train machine learning models that predict Google Workspace account upgrade, downgrade, and churn behaviors.
- Built pipeline using FlumeJava, a Java MapReduce framework, to extract and aggregate 70+ web domain level ML features from a database containing the HTML of more than 500 billion web pages, increasing customer coverage in the feature store by 20%.
- Designed and implemented a scalable and extensible data aggregation architecture by applying advanced OOP design patterns that reduced feature implementation time by over 50% and provided an intuitive interface for future feature store contributions.
- Refactored pipeline to improve reliability by developing a system to flush intermediate output to disk across 100k+ threads during a full table scan, preventing data loss by storing more than 7 days of data progress during each pipeline execution.

GEORGIA TECH FINANCIAL SERVICES AND INNOVATION LAB

Atlanta, GA

Undergraduate Research Assistant (Team Lead)

January – May 2023

- Led a team of 4 researchers in performing sentiment analysis on earnings calls transcripts on 12 electric vehicle companies using the large language model FinBERT and natural language processing library NLTK.
- Developed a custom web scraper using BeautifulSoup to extract over 70 earnings call transcripts from The Motley Fool.
- Created dynamic visualizations from analyzed text data to conclude that 5 major US government policies drove spikes in positive sentiment in earnings calls from companies that focus on electric vehicle production.

Projects

Hemodynamics Calculator | *JavaScript, React, MongoDB, Express, Node*

August 2023 – April 2024

- Developed the Hemodynamics Calculator, a full-stack application for the Emory University School of Medicine, to be used by 10 clinicians to reduce measurement error daily, critically impacting over 1,000 cardiac ICU patients a year.
- Placed 3rd out of 50 teams in the Georgia Tech CS Capstone Expo, presenting to 40+ industry professionals and professors.

Machine Learning Soccer Prediction | *Python, sklearn, PyTorch, NumPy, Matplotlib, Seaborn*

August – December 2023

- Worked on a team of 5 to build and train logistic regression, random forest, and artificial neural network models using Scikit-Learn and PyTorch to predict soccer match outcomes with 70% accuracy, beating benchmark betting odds data by 8%.
- Built feature engineering strategies and conducted hyperparameter tuning to reduce overfitting, improving accuracy by ~10%.

Skills

Technologies: Java (JUnit), C/C++, Python (Pandas, NumPy, sklearn, PyTorch, Flask), JavaScript (React, Express), SQL

Languages: Fluent in Spanish, Swedish, English

Affiliations: Delta Chi Fraternity (Secretary, Professional Development Chair), Society of Hispanic Professional Engineers
