## Education

GEORGIA INSTITUTE OF TECHNOLOGY

August 2021 – May 2025 (expected)

**B.S. Computer Science, concentrations in Intelligence (AI/ML) and Theory**

3.96/4.0 GPA

Relevant Coursework: Data Structures & Algorithms, Machine Learning, Deep Learning\*, Graduate Algorithms\*, Computer Organization & Programming, Objects & Design, Probability & Statistics, Automata & Complexity, Number Theory (\* = current)

## Experience

GOOGLE

Kirkland, WA

**Software Engineering Intern**

May – August 2024

- Design and implement a distributed load testing framework using C++ and Python to gauge scalability of a novel data streaming service and write-ahead log RPC within Google BigQuery's core infrastructure.
- Implement continuous runs of the framework as a custom workflow used in development to detect bottlenecks and prevent latency and throughput regressions before reaching production, leading to a projected 20% reduction in server request latency.
- New load sampling framework reduces test implementation time by 50%, enabling faster iteration cycles for performance testing.
- Develop custom alerting and monitoring dashboards, allowing for 4x faster detection of critical performance regressions.

GEORGIA TECH EFFICIENT AND INTELLIGENT COMPUTING LAB

Atlanta, GA

**Undergraduate Research Assistant**

January – May 2024

- Contributed to a PyTorch toolkit to train distributed Graph Neural Networks (GNNs) for applications with multiple disjoint large graph datasets, such as electronic design automation analysis.
- Built a user-friendly modular data loading and transfer API and implemented the GraphSAGE GNN forward propagation and graph vertex embedding algorithm, improving model accuracies by an average of 15%.

GEORGIA TECH COLLEGE OF COMPUTING

Atlanta, GA

**Undergraduate Teaching Assistant (Homework Lead)**

August 2022 – May 2024

- Managed a team of 40 TAs in the development and grading of 12 homework assignments for over 800 students per semester as TA Homework Lead for CS 1331: Intro to Object-Oriented Programming (Java) under Prof. Richard Landry and Dr. Aibek Musaev.
- Led weekly recitations for 50 students and helped students with problem-solving and debugging during one-on-one office hours.

GOOGLE

Sunnyvale, CA

**Software Engineering (STEP) Intern**

May – August 2023

- Designed, implemented, and tested an efficient parallel-processing data pipeline being used in production to provide features to train machine learning models that predict Google Workspace account upgrade, downgrade, and churn behaviors.
- Built pipeline using FlumeJava, a Java MapReduce framework, to extract and aggregate 70+ web domain level ML features from a database containing the HTML of more than 500 billion web pages, increasing customer coverage in the feature store by 20%.
- Engineered a scalable and extensible data aggregation architecture by applying advanced OOP design patterns that reduced feature implementation time by over 50% and provided an intuitive interface for future feature store contributions.
- Refactored pipeline to improve reliability by developing a system to flush intermediate output to a Spanner database across 100k+ threads during a full table scan, preventing data loss by storing more than 7 days of data progress during each pipeline execution.

GEORGIA TECH FINANCIAL SERVICES AND INNOVATION LAB

Atlanta, GA

**Undergraduate Research Assistant (Team Lead)**

January – May 2023

- Led a team of 4 researchers developing a Python pipeline to perform sentiment analysis on earnings calls transcripts on 12 electric vehicle companies using the large language model FinBERT and natural language processing library NLTK.
- Developed a custom web scraper using BeautifulSoup to extract over 70 earnings call transcripts from The Motley Fool.

## Projects

**Hemodynamics Calculator** | JavaScript, ReactJS, MongoDB, Express, NodeJS

August 2023 – April 2024

- Developed the Hemodynamics Calculator, a full-stack MERN application for the Emory University School of Medicine used by over 10 clinicians to reduce blood flow measurement error daily, critically impacting more than 1,000 cardiac ICU patients a year.
- Placed 3rd out of 50 teams in the Georgia Tech CS Capstone Expo, presenting to 40+ industry professionals and professors.

**Machine Learning Soccer Prediction** | Python, Scikit-Learn, PyTorch, NumPy, Matplotlib, Seaborn

August – December 2023

- Worked on a team of 5 to build and train logistic regression, random forest, and artificial neural network models using Scikit-Learn and PyTorch to predict soccer match outcomes with 70% accuracy, beating benchmark betting odds data by 8%.
- Built feature engineering strategies and conducted hyperparameter tuning to reduce overfitting, improving accuracy by ~10%.

## Skills

**Programming Languages:** Java, C/C++, Python, SQL, JavaScript, LaTeX

**Frameworks:** FlumeJava (MapReduce), JUnit, NumPy, Pandas, Scikit-Learn, PyTorch, ReactJS, Express, NodeJS, Flask

**Tools:** Git, Mercurial, Bazel, Protobuf, gRPC, Spanner, MySQL, MongoDB
